

About MN Community Measurement

MN Community Measurement (MNCM) is a nonprofit, multi-stakeholder collaborative organization, founded in 2005, that empowers health care decision makers with meaningful data to drive improvement. Our multi-stakeholder collaborative includes physicians, hospitals and health systems, health plans, employers, consumers, and state government. MNCM was formed as a community resource where all health care stakeholders – whether they buy, manage, provide, deliver, oversee, or consume health care – come together and mutually invest in improvement for a better tomorrow.

MNCM specializes in developing, collecting, analyzing, and publicly reporting information on health care quality and cost. MNCM is unique in the depth and breadth of its measurement and transparency activities, including one of the most robust price/cost transparency efforts in the country.

Health Care Data Analyst

MNCM is seeking a health data analyst to join our team. This position completes analysis on a variety of projects using multiple types of health care data related to both quality and cost. This position coordinates the design, maintenance, reporting and sharing of data across departments within MNCM and with local and national clients and partners.

Being creative and innovative on ways to get work done, as well as a willingness to move rapidly on unexpected opportunities will be keys to success. To thrive in this role, a candidate must have strong project management, facilitation and communications skills, knowledge of the health care industry, experience with data sources, collection and analysis, effective relationship and consensus building with a variety of individuals and organizations, a customer service orientation and a passion for measurement and improvement.

Essential Functions in Brief

- Conduct data analysis to provide MNCM/customers with information relevant to project goals.
- Track Medicare health care measurements (MIPS, Star) and conduct regular comparisons to MNCM measurements
- Manage data systems and files using programming language, computer software, or statistical software package to create, modify and share data files/systems.
- Document and manage the data acquisition and manipulation process and perform data validation throughout project.
- Select appropriate statistical techniques for the projects, perform statistical analysis and interpret data into meaningful, actionable information for customers.
- Ensure storage and exchange of files comply with state and federal law, MNCM security policy and protocols, and other internal requirements.
- Produce written reports or summary consistent with department policy and format.

Desired Education and Experience

- Bachelor's degree in economics, statistics, informatics, public health, or a related field and 3+ years related experience. Master's degree in health care administration or related field preferred.
- Knowledge of health insurance claims data and/or clinical data for financial and clinical reporting.
- Experience and knowledge with database design and maintenance.
- Ability to write reproducible database queries via SAS, SQL
- Ability to communicate complex ideas concisely and clearly, orally and in writing.
- Strong analytic skills used for problem solving, program evaluation, reporting and presentation.
- Knowledge of software for analytical, reporting and presentation purposes.
- Organized and detail-oriented approach to work.
- Ability to work with minimal supervision, make decisions and solve problems independently, effectively and creatively.
