

Colorectal Cancer Screening

IN MINNESOTA

For care delivered in 2023

The Colorectal Cancer Screening measure is defined as the percentage of patients aged 45-75 who had an up-to-date colorectal cancer screening. **In 2023, the statewide average was 70.4%.**

Colonoscopies & Stool Blood Tests were the most used screening tests among those with an up-to-date colorectal cancer screening

9 regions had above average rates of screening compared to the Minnesota Resident Average*

*Minnesota Resident Average is a recalculated statewide average that includes only patients with a Minnesota ZIP code as their residence.

5 out of 10 Patients between the ages of **45-49** had an up-to-date screening

8 out of 10 Patients between the ages of **70-75** had an up-to-date screening

Among the 45-49 age group, the following groups had **lower rates of screening**:

- **Males** (compared to females)
- **Hispanic/Latinx patients** (compared to non-Hispanic/Latinx patients)
- **Patients born outside of the U.S.** (compared to those born in the U.S.)
- **English-speaking patients** (compared to non-English speaking patients)

The number of additional patients with an up-to-date screening needed to close the gap in screening rates **within the 45-49 age group by race**
